AWARDS

- Medallion Award, Star Performer of Q1 2021**, Blume Global India, for delivering the Visibility product.
- Budding Engineer Award, Sep 2019**, Infogain

CORE COMPETENCIES

Software Engineering & Architecture

- Enterprise Software Engineering
- Front-end Architecture
- Enterprise SaaS Development
- Application Modernisation

Digital Platform & Engineering

- Micro-Front-end Architecture
- Component & Design System Engineering
- Cloud-Native Application Engineering
- API & System Integration

Technical Delivery & Transformation

- AI-Augmented Software Engineering
- Performance & Reliability Engineering
- Technical Solution Design
- Engineering Quality & Delivery Governance

EDUCATION

 Diploma in Advanced Software Development Methodologies | C-DAC, Pune | 8.56 CGPA | **2016 - 2017**

 Master of Computer Application | University of Rajasthan | 73.10% | **2014 - 2017**

 Bachelor of Computer Application | University of Rajasthan | 73.94% | **2011 - 2014**

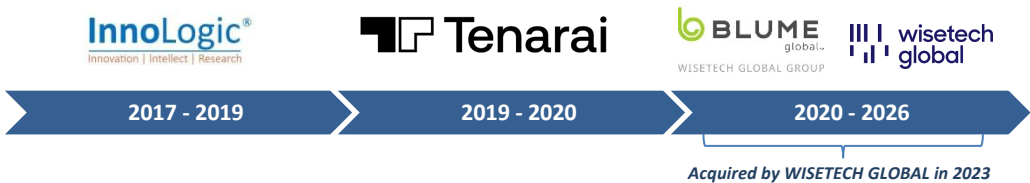

DOMAIN EXPOSURE

- Enterprise SaaS & Software Platforms
- Supply Chain & Logistics Technology
- Cargo & Shipment Visibility Solutions
- Automotive & Connected Vehicle Technology
- Digital Commerce & FinTech Solutions

PROFILE SUMMARY

- Senior Software Engineer** with 9+ years of experience in building and modernising enterprise SaaS applications across supply chain, logistics, automotive, investment management & digital commerce domains, with deep expertise in modern front-end engineering & distributed application ecosystems.
- Front-end Architecture & Enterprise Application Specialist** with strong command of React.js, TypeScript, JavaScript and Vue.js, delivering scalable customer-facing platforms, micro-front-ends, shared component libraries and design-system capabilities for complex enterprise environments.
- Application Modernisation & Platform Engineering Expert** experienced in modular, reusable and independently deployable solutions using Micro-Front-end Architecture, Module Federation, component engineering and cloud-native delivery practices.
- AI-Augmented Engineering Practitioner** leveraging custom AI agents and multi-model workflows across design, coding, testing, code review, defect analysis and technical investigation, **reducing engineering task turnaround from 1–2 days to 6–7 hours**.
- Enterprise Engineering & Technical Ownership Leader** experienced in taking ownership beyond individual applications through shared platform components and libraries, enabling reusable improvements across CargoWise development teams while collaborating with distributed US and India engineering teams and mentoring junior engineers.

CAREER TIMELINE

BUSINESS IMPACTS & VALUE DELIVERED ACROSS CAREER

Enterprise Engineering & Platform Impact

- Shared Component Architecture:** Enhanced the central **Supply component library** rather than implementing project-specific workarounds, enabling reusable improvements to be consumed across teams using the shared repository.
- Enterprise SaaS Delivery:** Contributed to **CargoWise Neo**, supporting platform delivery, customer experience and continuous improvements across enterprise logistics workflows.
- Micro-Front-end Transformation:** Integrated independently deployable Visibility, Alerts and Ocean Visibility applications into a unified customer portal using **Module Federation**.
- Product Engineering:** Built the Blume Visibility platform from the ground up across **Air, Ocean, Dray, LTL, Parcel, Rail and TL** transportation modes.
- Distributed Delivery:** Collaborated with engineering teams across the **US and India**, contributing to enterprise product delivery, technical reviews and knowledge sharing.

TECHNICAL SKILLS

Category	Technologies / Tools
Front-end Development	React.js, Vue.js, TypeScript, JavaScript (ES6+), HTML5, CSS3
Front-end Architecture	Micro-Front-ends, Module Federation, Design Systems, Component Libraries
Backend Development	Node.js, Express.js
API & Integration	REST APIs, GraphQL, Server-Sent Events (SSE)
State Management	Redux
Databases	MongoDB
Testing	Vitest, Jest, React Testing Library
AI-Assisted Development	GitHub Copilot, Claude, Codex, GPT-based Workflows, Custom AI Agents
Build & UI Tooling	Webpack, Storybook, Bit.dev
Cloud & Containers	AWS EC2, Docker, Kubernetes
CI/CD & Version Control	Jenkins, GitHub Actions, Git
Mobile Development	React Native, Android, Java, Android Studio
Application Platforms	Adobe Experience Manager (AEM), Ionic, AngularJS, Unity

PROFESSIONAL EXPERIENCE

LUME GLOBAL (acquired by WISETECH GLOBAL in 2023) | Jun 2020 – Jun 2026

lume Global was a US-based multimodal supply-chain technology platform focused on end-to-end visibility and logistics execution and was acquired by WiseTech Global for **US\$414M in 2023**. Following the acquisition, the technology portfolio became part of the CargoWise ecosystem.

Software Engineer | San Ramon, California, United States | Sep 2022 – Jun 2026

Internal Transfer from Bengaluru, India to the United States

AI-Augmented Engineering: Applied Claude, Codex and GPT-based workflows across technical design, coding, test authoring, code review and defect triage; developed custom agents for recurring engineering activities, reducing engineering task turnaround from 1–2 days to 6–7 hours.

Enterprise SaaS Engineering: Delivered full-stack capabilities for CargoWise Neo within a 12-member US engineering team, supporting a globally deployed enterprise logistics platform.

Product & Workflow Engineering: Enhanced Forwarding Shipments, Booking, Containers, Liner & Agency Booking and Customs, including multi-step Customs, Declarations and Neo Booking workflows.

Shipment Visibility: Built and enhanced Blume Visibility for real-time tracking across Air, Ocean, Dray, LTL, Parcel, Rail and TL, incorporating milestone timelines, GPS tracking, exceptions and watchlists.

Micro-Front-End Architecture: Implemented Module Federation to integrate Visibility, Alerts and Ocean Visibility micro-frontends, enabling scalable and modular application architecture.

Shipment Tracking & Configuration: Built a white-label shipment-tracking micro-application with organisation-specific branding, milestone timelines and interactive maps; developed ELD Configuration for GPS-device credential management.

Product & Exception Management: Owned front-end development for Visibility and Alerts & Notifications, serving as the sole front-end developer and delivering Report Event and Report Exception workflows.

Workflow & Notification Engineering: Developed Create & Update ASN workflows across Air, Ocean, TL and LTL shipments and implemented custom email-template management for notification workflows.

Dashboard & Collaboration Solutions: Developed Share Dashboard capabilities supporting configurable sharing across organisations, groups and individual users with granular permission controls.

Reusable Component Architecture: Enhanced Supply, the shared Vue component library and Storybook environment; built Blume Cart with real-time Server-Sent Events (SSE) and contributed reusable Grid, Button, search and list components to the Bit.dev-hosted Blume Home library.

UI & Mobile Engineering: Implemented enterprise-wide dark/light theme architecture and contributed screens and list-based interfaces to Blume CarrierGo, a React Native application for freight carriers.

Defect & Root-Cause Engineering: Investigated cross-repository dependencies and shared data sources to trace defects to originating codebases, addressing platform-level reliability issues and supporting resolution of shipment-impacting defects.

Cloud & Engineering Delivery: Supported application deployment using Docker, Jenkins CI/CD and Kubernetes, while contributing to code reviews, technical problem-solving and engineering standards.

Senior Software Engineer | Bengaluru, India | Jun 2020 – Sep 2022

Product Engineering: Built the **Blume Visibility** platform from inception as a core front-end engineer within a **12-member team**, delivering real-time shipment visibility across Air, Ocean, Dray, LTL, Parcel, Rail and TL transportation modes.

Visibility Architecture: Developed shipment-detail experiences covering milestone timelines, live GPS tracking, exceptions and watchlist management using **React.js, Redux and Leaflet**.

Micro-Front-end Architecture: Integrated Visibility, Alerts and Ocean Visibility micro-front-ends into the central customer portal through **Module Federation**, enabling independently deployed applications to operate within a unified browser experience.

Workflow Development: Led front-end engineering for the **Create & Update ASN** module supporting Air, Ocean, TL & LTL shipment lifecycle processes.

Notification Engineering: Developed custom email-template management capabilities within the Alerts & Notifications micro-front-end using a React rich-text editor framework.

Cloud Deployment: Containerised front-end micro-front-ends using Docker and established Jenkins-based build and deployment pipelines targeting Kubernetes environments.

Engineering Quality: Participated in code reviews, technical problem solving and engineering standards to maintain application quality across a rapidly evolving product environment.

People Development: Mentored junior front-end engineers through structured code reviews, pair programming and hands-on technical guidance.

IFOGAIN (NOW TENARAI) | Software Engineer | Noida, India | Feb 2019 – May 2020

Automotive Digital Engineering: Developed **My Hyundai & My Genesis** portals on AEM, integrating **BlueLink telematics** for vehicle health, remote commands and service scheduling.

Connected-Car Development: Co-developed a **PWA** enabling cross-platform remote control of **battery status, headlights and climate functions**, integrating front-end experiences with automotive services.

Enterprise Delivery: Collaborated within a **10-members cross-functional team** to deliver responsive, customer-facing automotive digital solutions.

INNOVATIVE LOGIC LAB | Associate Product Engineer | Gurugram, India | Mar 2017 – Jan 2019

Product & Immersive Technology: Developed **InnoInvest** using AngularJS/Ionic for portfolio management and analytics, and implemented a **Unity-based VR Learning Management System** with 360° ship imagery for marinePALS maritime safety training.

Web, Cloud & Application Delivery: Delivered front-end solutions for **Clan Club ERP, Jeukart e-commerce, Ludo gaming and the corporate website**, while deploying and maintaining application servers on **AWS EC2** to support availability and continuity.

STARTUP EXPERIENCE

EGLELE | Co-Founder & Developer — M-Commerce Startup | Jaipur, India | Jul 2015 – Mar 2017

Entrepreneurial & Business Leadership: Co-founded an M-commerce venture enabling **farm-to-consumer delivery within one hour**, established multiple storage centres and independent vendor networks, and led investor engagement and business-development initiatives while pursuing a Master's degree.

Product & Technology Ownership: Designed, developed and launched the native **Android application using Java and Android Studio**, covering UI, API integration, backend services and end-to-end deployment while aligning technology execution with business requirements.
